

PBBT Brake Force Calibration – 3/21/05 – Kenosha, WI SWEF

Fixture, lever arm, and weights used for PBB brake force calibration. Serial numbers are stamped on all quality-affecting components. Traceable documentation of accuracy is available.

Industry guests David Nguyen of ATA (left) and Daniel Pierce of Schneider National assist with the assembly and installation of the brake force calibration fixture.

Set-up for Brake Force Calibration at BF of 6700 lbs. Combinations of weights at different fixed-notch positions provide multiple values of BF from zero up to the maximum (shown).
